RECORD OF REVISION

Revision Date	Page	Contents	Editor
2017/12/15	1	New Release	Mark
	ADVA	ANCED ELECTRONIC SYS	STEMS

1. GENERAL DESCRIPTION

The screen format is intended to support 1280(H) x 800(V) screen and 16.7M (RGB 8-bits)

1.1 Display Characteristics

Date: 2017/12/15

Item	Specifications	unit
Screen Diagonal	12.1	inch
Display resolution(dot)	1280 (RGB) x 800	dots
Display area	261.12 (W) x 163.2 (H)	mm
Pixel pitch	0.204(W) x 0.204 (H)	mm
Color configuration	R.G.B Vertical stripe	
Overall dimension	298.0(W) x 204.0(H) x 15.475(D)	mm
Display Mode	Transmissive, Normally Black	
Brightness	1000	cd/m ²
Backlight unit	LED	
Display color	16.7M	colors
Electri <mark>cal T</mark> reatment	1 channel LVDS	

Note(1) Viewing direction for best image quality is different from TFT definition; there is a 180 degree shift.

Note(2) LCM weight tolerance = 5% ELECTRONIC SYSTEMS

2. Input/output Terminals2.1 TFT LCD Panel

Relative Humidity (Note2)			≦55	%	50°C <ta≦60°c< td=""></ta≦60°c<>
			≦36	%	60°C <ta≦70°c< td=""></ta≦70°c<>
			≦24	%	70°C <ta≦80°c< td=""></ta≦80°c<>
Absolute Humidity	АН		≦70	g/m³	Ta>70°C

Table 3.1 absolute maximum rating

Date: 2017/12/15

Note(1) Input voltage include Rxin0-/+, Rxin1-/+, Rxin2-/+, Rxin3-/+, RxCLK-/+, SEL6/8, VDD.

Note(2) Ta means the ambient temperature. It is necessary to limit the relative humidity to the specified temperature range. Condensation on the module is not allowed.

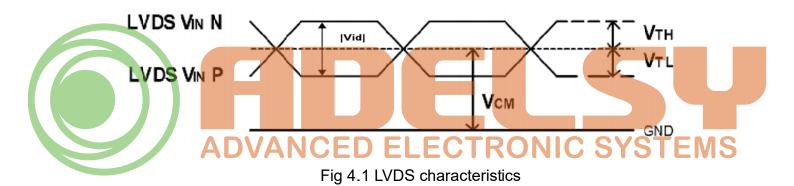

4. ELECTRICAL CHARACTERISTICS

4.1 Driving TFT LCD Panel

VDD=3.3V,GND=0V, Ta=25°C

Item	Symbol	Min	Тур	Max	Units	Remark	
Power supply '	Voltage	VDD	3.0	3.3	3.6	V	
Power supply	ripple	V_{P-P}	-	-	100	mV	
Power supply	current	I _{DD}	-	TBD	-	mA	
Power consur	mption	Р	-	TBD	-	mW	Note 1
Differential inpu	Vid	200	-	600	mV		
Differential input con	Differential input common voltage		-	1.2	-	V	
Differential input	Low level	VTL	-100	1	1	mV	
threshold voltage	High level	VTH	-	ı	100	mV	
Inrush Curi	rent	I _{rush}			1.5	Α	

Table 4.1 LCD module electrical characteristics

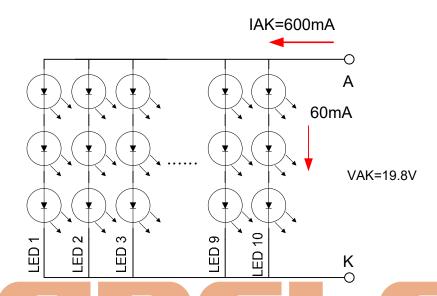

Note(1) To test the current dissipation, using the "white pattern" shown.

4.2 Driving Backlight

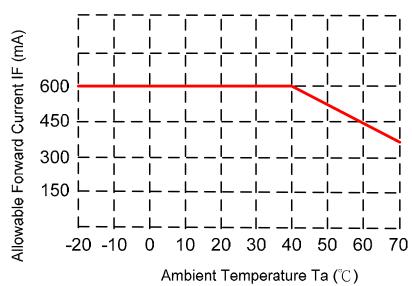

Input signals shall be low or Hi-Z state when VDD is off.

Item	Symbol	Min.	Тур.	Max	Unit	Remark
LED Backlight forward voltage	VF	-	18	20	V	
LED Backlight forward current	IF	-	-	600	mΑ	
Backlight power consumption	PLED	-	10.8	-	W	
Operating Life Time	-	ı	T.B.D	-	hrs	Note 1

- Note(1) Opti<mark>cal performance sh</mark>oul<mark>d be evaluated at Ta=25</mark>℃ only.
- Note(2) If LED is driven by high current, high ambient temperature & humidity condition.

 The life time of LED will be reduced. FCTRONIC SYSTEMS
- Note(3) Operating life means brightness goes down to 50% of initial brightness. Typical operating life time is estimated data.
- Note(4) When LCM is operated over 40° C ambient temperature, the IF should be follow :

7

5 Timing Chart

5.1 LVDS signal timing characteristics

VDD=3.3V, GND=0V, Ta=25℃

Parameter	Symbol	Min	Тур	Max	Unit
CLK frequency	1/t _C	67	71	75	MHz
Horizontal display area	thd	-	1280	-	tc
Horizontal period	th	1290	1440	-	tc
Vertical display area	tvd	-	800	-	th
Vertical period	tv	810	823	-	th
Frame Rate	F	-	60	-	HZ

Test Conditions:

- 1. The ambient temperature is $25\pm2^{\circ}$ C .humidity is $65\pm7\%$
- 2. The test systems refer to Note1 and Note 2.

Note(1) Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 5 minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

Note(2) Definition of viewing angle range and measurement system.

viewing angle is measured at the center point of the LCD by CONOSCOPE

(ergo-80)。

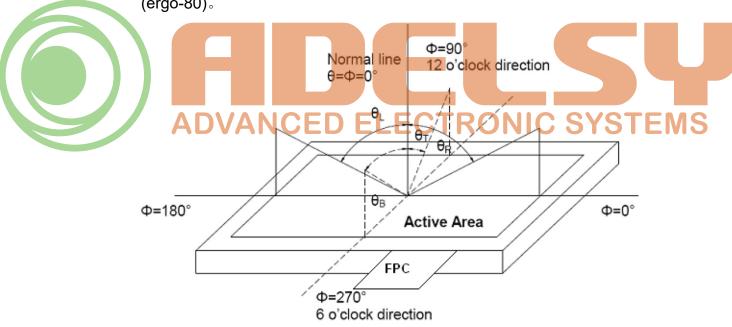

Fig. 1 Definition of viewing angle

Note(3) Definition of contrast ratio

 $Contrast \ ratio(CR) = \frac{Luminance \ measured \ when \ LCD \ is \ on \ the \ "White" \ state}{Luminance \ measured \ when \ LCD \ is \ on \ the \ "Black" \ state}$

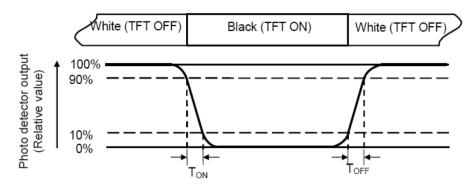

"White state ": The state is that the LCD should drive by V_{white}.

"Black state": The state is that the LCD should drive by V_{black}.

V_{white}: To be determined V_{black}: To be determined.

Note(4) Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90% to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%.

- Note(5) Definition of color chromaticity (CIE1931)

 Color coordinates measured at center point of LCD.
- Note(6) Definition of Luminance Uniformity

 Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

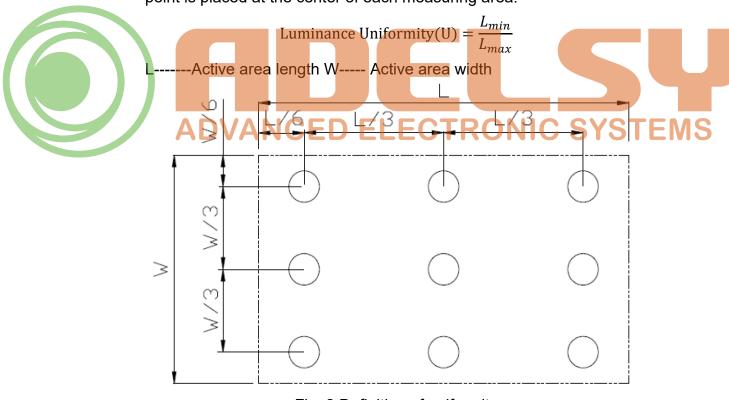

Fig. 2 Definition of uniformity

Lmax: The measured maximum luminance of all measurement position. Lmin: The measured minimum luminance of all measurement position.

Note(7) Definition of Luminance:

Measure the luminance of white state at center point.

7 Projected capacitive-type touch panel specifications

7.1 Basic Characteristic

ITEM	SPECIFICATION				
Type	Projective Capacitive Touch Panel				
Activation	Two-fingers or Single-finger				
X/Y Position Reporting	Absolute Position				
Touch Force	No contact pressure required				
Calibration	No need for calibration				
Report Rate	Approx. 80 points/sec				
Control IC	EETI EXC3146				

7.2 Electrical Absolute Max Rating

Interface

ADVANCED ELECTRONIC SYSTEMS

CN6				
Pin No.	Symbol	Function		
1	GND	Ground		
2	DA-	USB Data-		
3	DA+	USB Data+		
4	VIN	Power supply		
5	NA	NC		
6	NA	NC		

TP needs to work in environment with stable stray capacitance. In order to minimize the variation in stray capacitance, all conductive mechanical parts must not be floating. Intermittent floating any conductive part around the touch sensor may cause significant stray capacitance change and abnormal touch function. It is recommended to keep all conductive parts having same electrical potential as the GND of the touch controller module.

GND1, GND2 and GND3 should be connected together to have the same ground

8 Reliability Test Items

Test Item	Test Conditions	Note
High Temperature Operation	Ts = 70°C , t=240 hrs	
Low Temperature Operation	Ta = -20°C , t=240 hrs	
High Temperature Storage	Ta = 80°C , t=240 hrs	1,2
Low Temperature Storage	Ta = -30°C , t=240 hrs	1,2
Storage at High Temperature and Humidity	Ta = 60°C, 90% RH , 240 hrs	1,2
Thermal Shock Test	-30°C (30min) ~ 80°C (30min) Change time:5min, 100 cycles	1,2
Vibration Test (Packing)	Frequency range:10~55Hz, Stroke:1.5mm Sweep:10Hz ~ 55Hz ~ 10Hz 2hours for each direction of X.Y.Z (6 hours total)	2

Note(1) Ts is the temperature of panel's surface.

Note(2) Ta is the ambient temperature of sample.

9 USE PRECAUTIONS

9.1 Handling Precautions

- (1) The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- (2) If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- (3) Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- (4) The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- (5) If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
 - Isopropyl alcohol
 - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer.

Especially, do not use the following:

Water

Date: 2017/12/15

Ketone

Aromatic solvents

- (8) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
- (9) Be sure to ground the body when handling the LCD Modules.
- (10) Tools required for assembly, such as soldering irons, must be properly ground.
- (11) To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- (12) The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

9.2 Storage Precautions

- (1) When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- (2) The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

 Temperature : 0°C ~ 40°C Relatively humidity: ≤80%
- (3) The LCD modules should be stored in the room without acid, alkali and harmful gas.

9.3 Transportation Precautions

(1) The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.

9.4 Mechanical

(1) Please hold the LCD module properly when you use or store it.

9.5 Other

- (1) AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
- (2) Do not keep the LCD at the same display pattern continually. The residual image will happen and it will damage the LCD. Please use screen saver.

10. OUTLINE DIMENSION
